DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 – 7 and 9 – 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Gopinath et al. (U.S. Pat. No. 5,925,097) (Directly Programmable Distribution Element).

2.1 Regarding claim 1, Gopinath discloses a method for assigning an address to a node in a network having an arbitrary topology (col. 14, lines 10 – 16 “arbitrary topology networks; col. 16, lines 9 – 15), the method comprising:

providing a first address to a first node such that the first address includes a description of a path to the first node (Fig. 21; col. 25, lines 1 – 11 “local VC number”; col. 34, lines 36 – 61; col. 37, lines 8 – 18); and

establishing a mapping between plurality of output ports in the network and bits in the first address such that a packet, directed to the first address, at a second node in

the network is forwarded via an output port on the second node in the network, in response to a specified bit in the first address having a specified value (Fig. 21; col. 25, lines 1 – 11; col. 34, lines 36 – 61; col. 37, lines 8 – 18).

2.2 Per claim 2, Gopinath teaches the method of claim 1 wherein the network is an *optical* network (col. 9 lines 9 – 12).

2.3 Regarding claim 3, Gopinath discloses the method of claim 1 wherein at least one node in the network has more than one address (col. 25, lines 1 – 11; col. 34, lines 36 – 61; col. 37, lines 8 – 18).

2.4 Per claim 4, Gopinath teaches the method of claim 1 wherein concurrent bits in the first address map to output ports on the second node (Fig. 14; col. 25, lines 1 – 11; col. 34, lines 36 – 61; col. 37, lines 8 – 18).

2.5 Regarding claim 5, Gopinath discloses the method of claim 4 wherein the map is a one-to-one correspondence (Figs. 14, 21; col. 25, lines 1 – 11; col. 34, lines 36 – 61; col. 37, lines 8 – 18).

2.6 Per claim 6, Gopinath teaches the method of claim 4 wherein each of the output ports on the second node maps to a bit in the concurrent bits in the first address (Figs. 14, 21; col. 25, lines 1 – 11; col. 34, lines 36 – 61; col. 37, lines 8 – 18).

2.7 Regarding claim 7, Gopinath discloses the method of claim 1 further including associating an output port in a node to an unused bit in a sub-field corresponding to the node in an address such that in response to a new address for directing a packet to a node in the network, the packet is forwarded via the output port (Figs. 14, 21; col. 25, lines 1 – 11; col. 34, lines 36 – 61; col. 37, lines 8 – 18).

2.8 Per claims 9 – 21, the rejection of claims 1 – 7 under 35 USC 102(b) (paragraphs 2.1 – 2.7 above) applies fully.

Allowable Subject Matter

3. Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 1 – 7 and 9 – 21 have been considered but are moot in view of the new ground(s) of rejection.
